Versioning for Published Articles

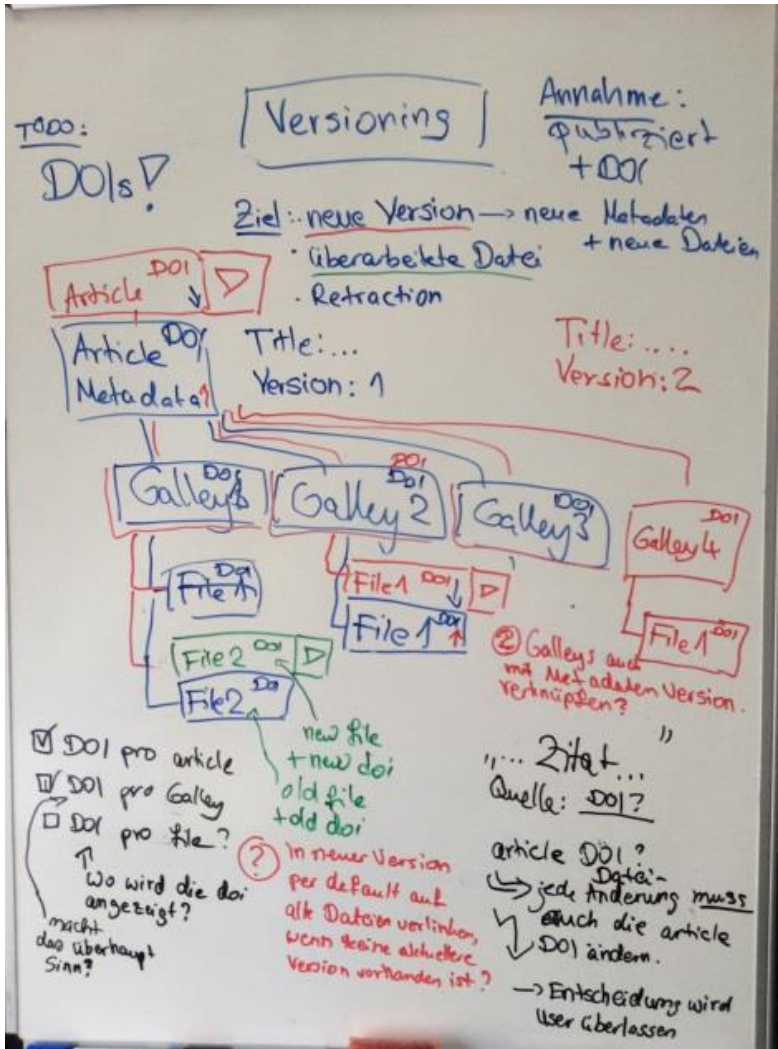

- publish changed article version
- keep old versions public
- display metadata accordingly

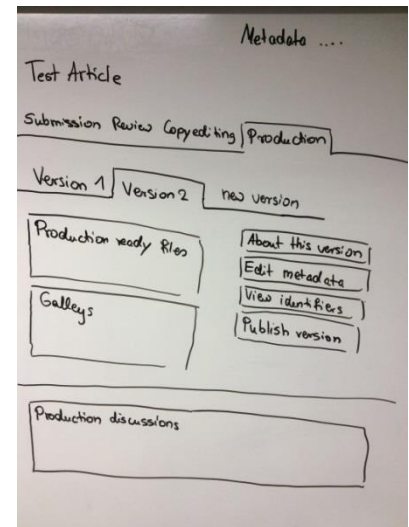

Conceptioning Process

- conceptual changes at core
- long discussion with PKP ([issue](#))

Article Versions	date	comment
▷ Current version view hide delete	2016-11-11	"this is a new and revised version..."
▷ version 2 view hide delete	2016-11-01	"typo"
▷ version 1 view hide delete	2016-10-30	—

Backend: Overview of Versions

The screenshot displays the OJS backend interface for managing article versions. The top navigation bar includes links for Metadata, Editorial History, View Site, Submission Library, and an admin user profile. The main content area is divided into several sections:

- Test Article:** Shows the author (Test Autor) and a tabbed interface for different stages: Submission, Review, Copyediting, and Production. A callout indicates that each version has its own tab and that older versions are read-only.
- Version Management:** Displays Version 1, Version 2, and a 'New Version' button. A callout explains that clicking 'New Version' creates a new version by copying all relevant data.
- Production Ready Files:** Lists files attached to the article, such as '384-1 Test Autor, my-submission.odt'. It includes search and upload file options.
- Article Text:** Provides an area to edit the article text, with 'Order' and 'Add galley' options. A callout notes that users can edit and publish later.
- Galleys:** Shows attached galley files (PDF and HTML). A callout states that galley IDs are preserved across versions for statistical tracking.
- Metadata of this Version:** A section for managing metadata like title, author, and abstract.
- Publish this Version:** A prominent blue button to publish the current version.
- Participants:** Lists roles and users, including the Production editor (Produktions Editor) and the Author (Test Autor). An 'Assign' button is available.
- Production Discussions:** A section for managing discussions, with an 'Add discussion' button and columns for Name, From, Last Reply, Replies, and Closed.

Lessons Learned

- ✓ better to base on a stable system
- ✓ conception before implementation
- ✓ communication!

CC0 Public Domain

Next Steps

- merge code in master branch
- adapt third party plugins
